

About Wave Technologies

Wave Technologies, Inc, is a young and growing Woman, Native American, Vietnam Veteran owned, HUBZone certified, small disadvantaged business (SDB). With headquarters in Ponca City, OK and offices in Lumberton, NC and Quantico, VA, Wave Technologies provides telecommunications, information technology (IT), and financial and program management support services to government and commercial clients in the intelligence, national security, information technology, telecommunications, and healthcare fields.

The Wave Technologies staff understands the technology and has the experience required to process and exploit data, support the planning, design, development, integration, installation, production engineering, and operations of all the IT associated with the local area networks (LAN), metropolitan area networks (MAN), wide area networks (WAN), and distributed wireless internet environments and support IT system lifecycle engineering and programmatic requirements. We have the capabilities required to tailor and integrate COTS products with government applications to meet client mission requirements. We are an authorized value added reseller for leading industry hardware and software manufacturers including Dell, Cisco, 3COM, HP, Compaq, and Logcastor and have business relationships with a number of other commercial hardware and software vendors. Wave Technologies is an excellent small disadvantaged business resource for information technology. We have the products and services to help meet your needs.

Since founding Wave Technologies in 2000, we have developed IT and related services contracts with both government and commercial clients, established a complete internet service provider (ISP) and telecommunications subsidiary, and developed a patented product line of disaster recovery/continuity of operations and field services support networking support tools.

We developed core competencies in:

- Deployable network solutions
- Wireless internet services
- Voice over IP (VoIP) technologies
- Signals analysis
- Program and financial management
- Systems Engineering and Technical Assistance (SETA) support
- Internet and network services
- Data warehousing
- Data base maintenance
- Hardware integration
- Telecommunications engineering
- Fiber optic cable installation
- Medical record and other document conversion and management
- Full ISP capability
- Call center and help desk support
- Value-added hardware and software procurement.

Wave Technologies' government clients include both federal and local organizations. We perform telecommunications, systems engineering, and signals analysis for the National Reconnaissance Office (NRO) with engineers holding TS/SCI clearances with counter-intelligence polygraphs, IT systems support at the National Imagery and Mapping Agency (NIMA), systems engineering and technical assistance (SETA) including financial and program management for the Navy's Loitering Electronic Warfare Killer (LEWK) unmanned aerial vehicle (UAV) program, and database management at the Defense Threat Reduction Agency (DTRA). Local government contracts include the Robeson County, N.C. Sheriff's Department network and the Scotland County, N.C. Department of Social Services IT support and document imaging, conversion, and management.

Commercial contracts include operating a rural ISP and telephone company, providing wireless internet services for businesses in two North Carolina cities, and health record imaging, conversion, indexing, and storage for a health care provider. Wave Technologies' ISP provides telephone dial up and wireless internet services for over 600 clients including small businesses in Lumberton and Pembroke, N.C. Wave Technologies recently established a network operating center (NOC) in our Lumberton, NC facility to support our latest commercial contract - providing Voice over Internet Protocol (VoIP) services between the U.S. A. and India. After establishing the NOC and installing the far-end equipment in Delhi, we currently provide approximately 2 million minutes of VoIP services per month with controlled growth planned to 50 million minutes per month by June 2003. Wave Technologies provides our commercial clients with a full set of telecommunications and network support functions including a fully functional help desk/call center.

Wave Technologies' patented product line of disaster recovery/continuity of operations networking support tools is called the Universal Network and Internet Point-Of-Presence (UNI PoP[®])

UNI PoP[®] is the ideal network services provider tool for humanitarian support operations in underdeveloped countries where no internet infrastructure currently exists. A single UNI PoP[®] provides telephonic, ISDN, and wireless networking in a single box. Using commercial off-the-shelf components and RF transceivers and antennas, a complete UNI PoP[®] can support up to 20 dedicated, 96 wireless, and 192 dial-up users simultaneously in a 220 pound 3' by 3' by 2 1/2' easily transportable casing.

Wave Technologies holds a prime contract with the Department of Interior (GovWorks) and the General Services Administration (Schedule 70). Additionally, we have subcontracting relationships with AT&T, DigitalNet (Getronics), DynCorp, General Dynamics, and SAIC. The Defense Security Service (DSS) recently awarded Wave Technologies a facility security clearance.

Wave Technologies offers a Best Value small disadvantaged business with broad IT support technical experience, a proven track record, a can-do spirit, and a focus on customer satisfaction.
