

The Islamic movement is affecting America's population

by Randy Bright <http://www.tulsabeacon.com/?p=4807>

The urban planners of our day are busy planning the communities of tomorrow but few of them realize just how fruitless their visions may turn out to be.

They believe that demographics predict a society of so-called TINK families (two incomes, no kids) of young professionals that demand more walkable communities and downtown housing. In one respect, they may be right. Though I disagree that children are somehow going to become obsolete, there are statistics that support the belief that if America's population isn't shrinking, its rate of growth is at least slowing down.

What urban planners have not even considered, however, is the kind of population growth that is occurring, and what the demographics may actually be in twenty to thirty years. It is astounding that they have yet to realize how the existing cultural evolution to Islam will dramatically change their demographic models.

Mark Steyn wrote about these changing demographics in his book *America Alone*, and now there is a video available on YouTube www.youtube.com/watch?v=6-3X5hIFXYU that supports his beliefs about the growth of Islam. I urge you to read the book and watch the video, but here are some of the statistics and facts that you will see in the video.

It explains that for a culture to maintain itself for over 25 years, it needs a fertility rate of 2.11 children per family, that no culture has ever survived a fertility rate of 1.9 and that a fertility rate of 1.3 is an irreversible condition.

The average fertility rate for all the countries in Europe combined is 1.38, with France at 1.8, England 1.6, Greece 1.3, Germany 1.3, Italy 1.2 and Spain 1.1. However, the fertility rate for the Muslim population living in Europe is 8.1, which means that the actual fertility rate of indigenous Europeans is very, very low.

Since urban planners like to base their concepts on the young adult population, consider this. In Southern France, 30 percent of the population of people 20 years old or less is already Muslim, and in major cities like Nice, Marseilles, and Paris, it is 45 percent. Projections are that by the year 2027, one out of every five of the French will be Muslim and in 39 years France will be a Muslim nation.

In England, over the past thirty years, the Muslim population has grown from 82,000 to 2.5 million.

In the Netherlands, half of all newborns are Muslim, and they believe that within 15 years half of the population will be Muslim.

Russia already has 23 million Muslims, which is 20 percent of its population, and within a few years they believe 40 percent of the Russian army will be Muslim.

In Belgium, a fourth of the population is already Muslim, and half of their newborns are Muslim. In Germany, they have already conceded defeat. The Germany Federal Statistics Office is reported to have said, "The fall of the German population can no longer be stopped. Its downward spiral is irreversible...It will be a Muslim state by 2050."

On average, by 2025, a third of all children born in Europe will be Muslim, and the combined total of 52 million Muslims in Europe will double over the next 20 years.

Canada's fertility rate is 1.6 and its population grew by 1.6 million between 2001 and 2006. 1.2 million out of the 1.6 were immigrants.

In the United States, our fertility rate is 1.6, but when you include the Latino population, it is 2.11. In 1970, there were 100,000 Muslims in American. Now there are 9 million.

The Catholic Church has stated that the number of Muslims has now exceeded the number of Catholics in the world, and that within 5 to 7 years, Islam will be the dominant world religion. So how will this affect the urban environment in America if we allow Islam to grow to the same degree as it has in Europe? That will depend on what kind of Islam is dominant, but regardless of whether it is the moderate or radical type, life will be much different, including the ways our cities are designed. The first infrastructure changes we will see will be just like in Europe; churches will be converted to mosques.

Before there is Muslim majority in America, there will likely be a flood of Europeans leaving their countries to escape to America as their countries are slowly taken over by Muslims. They will need to leave because it will be far too dangerous for them to stay.

The reality is that today's ideals of urban planning will not matter much in the face of an Islamic majority. The culture is simply too different, and the priorities of today's urbanites will be shunned by Muslims. And if you don't believe our lifestyles won't be changed, look at how much our lives have already changed due to Islam.

Barring some miracle, Europe may be beyond redemption already, but America still has a chance to preserve its freedom, if only its citizens will recognize the danger and stand against Islam in all its forms.
